

**TRAFFIC AND URBAN
TRANSPORT ENGINEERING**

TRAFFIC AND URBAN TRANSPORT ENGINEERING

CeRyX Traffic System is a technical consulting firm that provides customised traffic and urban transport engineering services to its customers, primarily local authorities.

Our engineers, located throughout France, work on both domestic and international projects.

Our engineers go through every aspect of the project in fine detail with the customer to ensure that nothing is left to chance. This guarantees that we propose the very best solutions for the circumstances.

SUPPORTING CUSTOMERS EVERY STEP OF THE WAY

CeRyX Traffic System conducts assessment, expertise and consultancy work. We are able to act as the main contractor, provide support to the contracting authority, and play an active role in the execution phases.

PROFESSIONAL SOLUTIONS BUILT ON GENUINE EXPERTISE

As experts in traffic control, traffic studies, transport planning and stand design and public transport priority system integration, we work hard to develop road-sharing solutions that offer the best balance between different forms of transport.

All of our studies are guided by a concern for sustainable development, and compliance with relevant regulations, standards and technical guidelines.

CeRyX Traffic System is a renowned traffic light expert. It is actively involved with France's CN05 standardisation committee (which is responsible for urban traffic control matters), and in the work of the 'Controllers' working group in particular.

Travel and mobility solutions

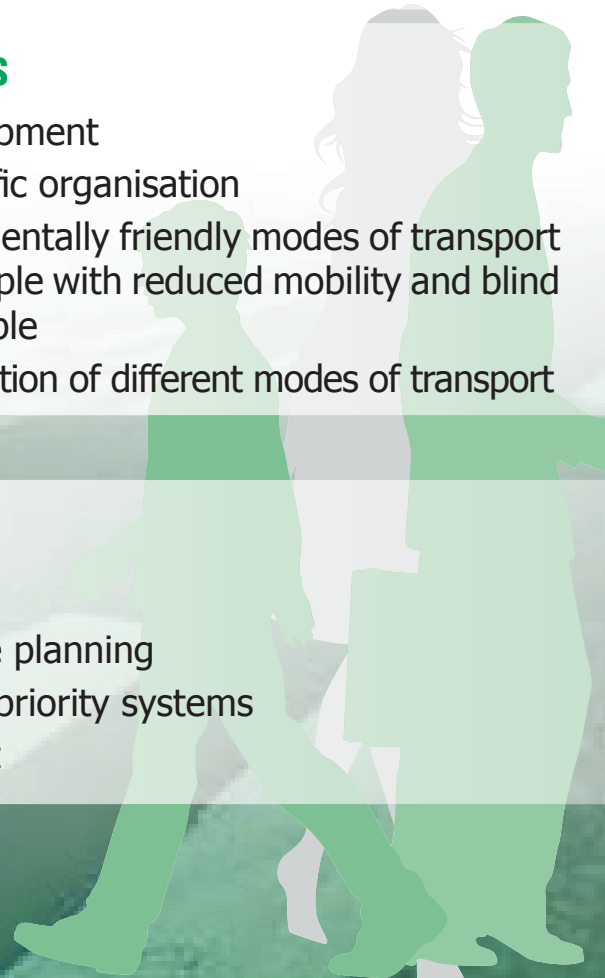

- Transport assessments (all modes of transport)
- Preliminary and feasibility studies
- Dynamic simulations, traffic modelling
- Integration and traffic impact studies
- Accident and safety analyses

Road-sharing solutions

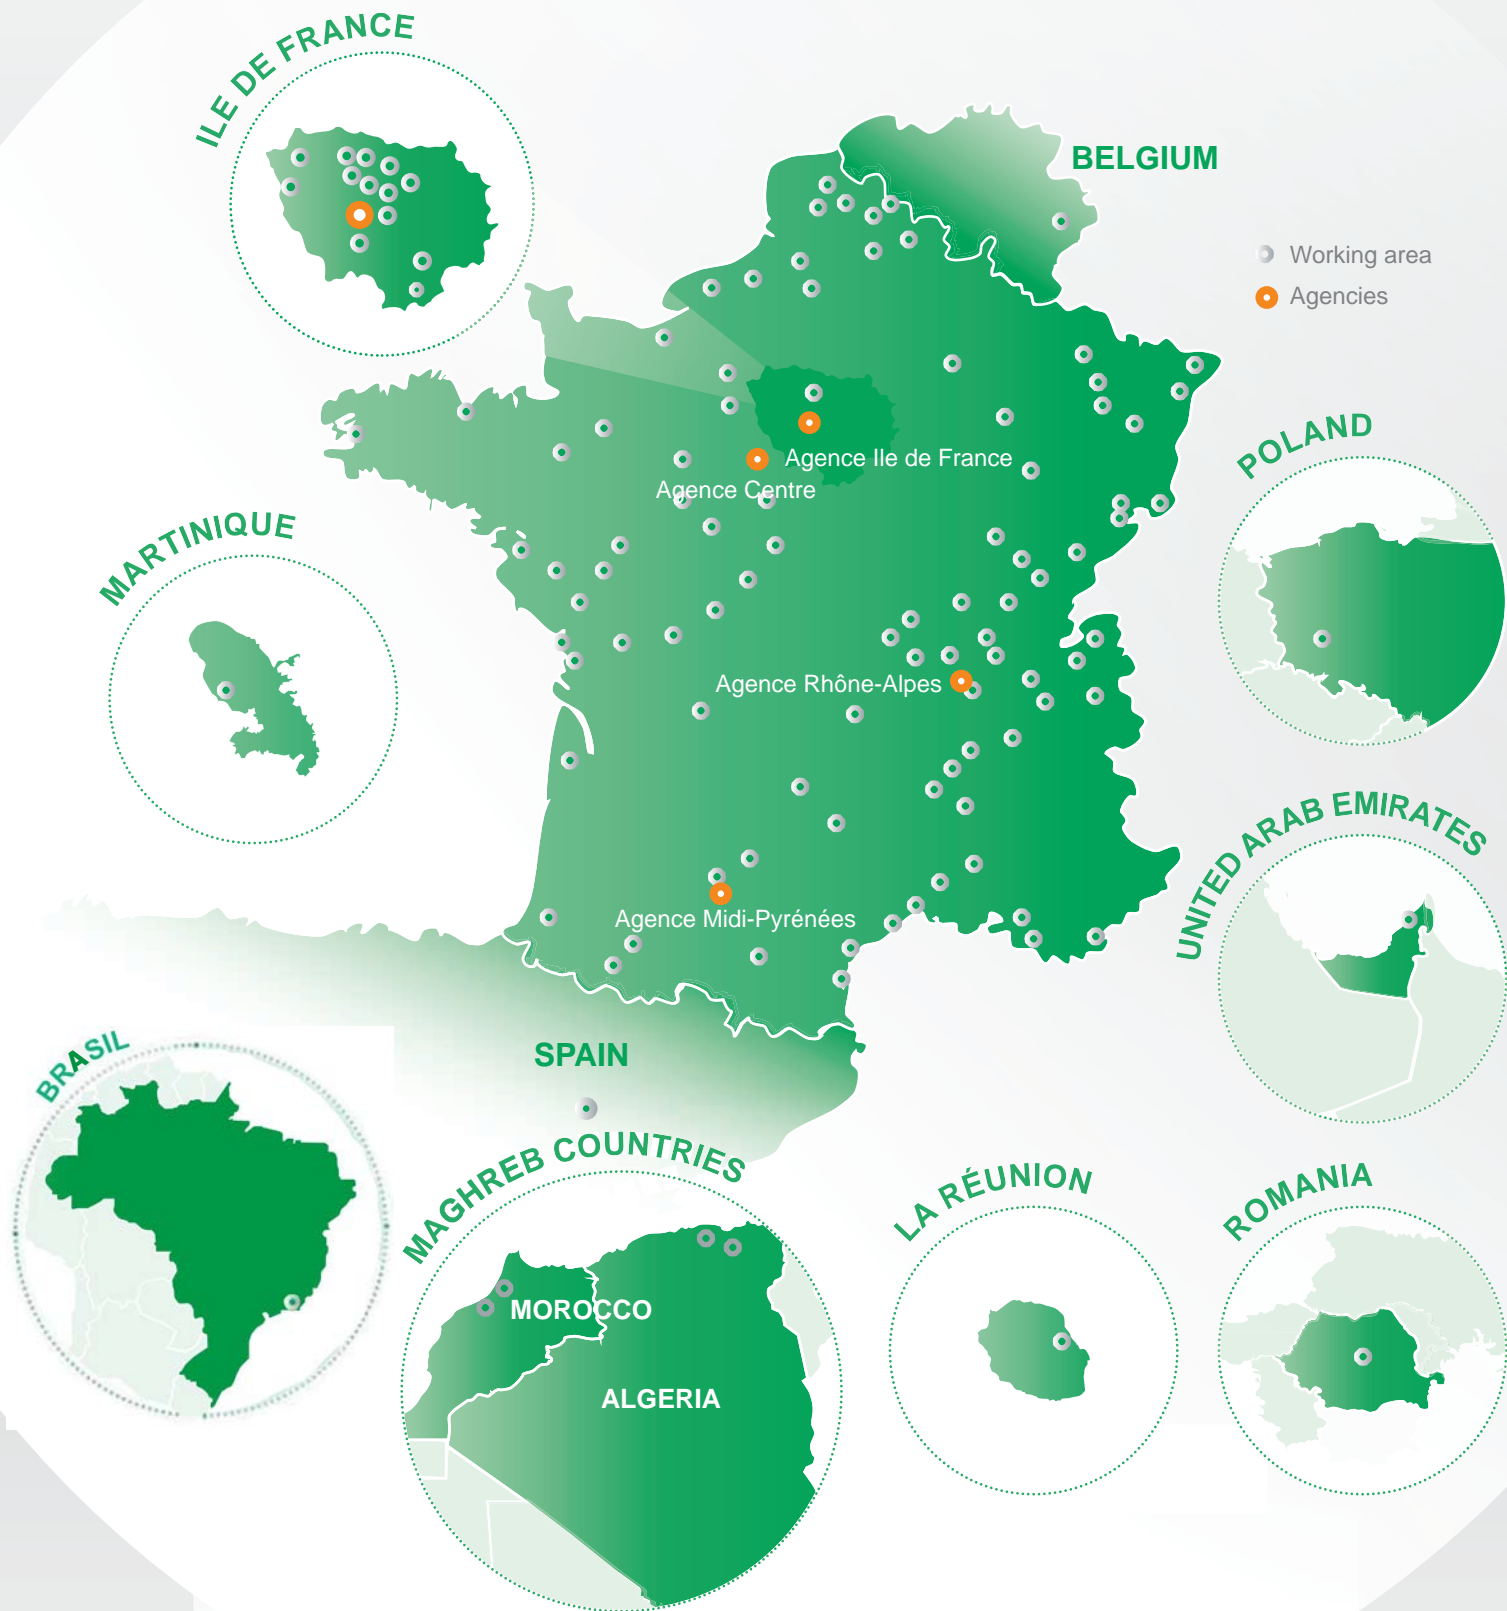

- Urban junction development
- Interchange hub traffic organisation
- Expertise in environmentally friendly modes of transport and accessibility for people with reduced mobility and blind or visually impaired people
- Integration and optimisation of different modes of transport

Sustainable transport solutions

- Transport route operation analysis
- Development of master plans, route planning
- Implementation of public transport priority systems
- Sustained performance improvement
